

My Name is Gary Gross and I have been a Amateur Radio operator for 24 years. I strongly object to the implementation of BPL (broadband over powerline or PLC). Studies done by Amateurs in Europe, Japan and the US leave little doubt that access PLC poses a significant interference risk to HF communications. Amateur Radio is national resource that provides emergency communications through out the nation and the world with trained volunteer operators. If BPL is implemented Billions of dollors of RF equipment will be rendered useless. Amateur Radio, a great national resource will be lost. Communications used by the Armed Forces, NSA and CIA will be affected also. BPL is a Threat to homeland security and I strongly urge you not to allow it to continue. Thank you. Gary Gross. KE6QR
